

WHAT IS CLAIMED IS:

1. A method of rendering screen of a computer display device under conditions requiring frequent repainting of the screen, said display device being a part of a computer system running an application under control of an operating system, said method comprising the steps of:
 - a. detecting the onset of conditions requiring frequent repainting of the screen,
 - b. obtaining from the operating system information necessary for repainting,
 - c. partly repainting the screen,
 - d. checking whether conditions of step a. still apply, and
 - e. repeating steps b. through d. until the conditions of step a. no longer apply.
2. A method according to claim 1, wherein the application is a graphic visualization application.
3. A method according to claim 2, wherein steps a., b., and d. are carried out based on messages sent by the operating system to the application's message queue.
4. A method according to claim 3, wherein the operating system is MS Windows operating system.
5. A method according to claim 4, wherein the screen displays a graphically complex visualization scene.
6. A method according to claim 5, wherein the conditions requiring frequent repainting of the screen are a result of an navigation operation initiated by an application user.
7. A method according to claim 6, wherein the scene is navigated with an input device.
8. A method according to claim 7, wherein the input device is a mouse or a keyboard.

9. A method according to claim 7, wherein the navigation operation is selected from the group consisting of panning, rotating and zooming.
10. A method according to claim 5, wherein the scene is represented in the computer system as a scene graph.
11. A method according to claim 10, wherein in step c. the screen is partly repainted by rendering a predetermined number of objects of the scene graph.
12. A method according to claim 11, wherein step c. is repeated and more objects are added to the scene if in step d. no navigation-related message is found in the message queue.
13. A method according to claim 12, wherein the screen is repainted in the order of traversing the scene graph.
